

Invisible Skyscrapers with False Clues

The shape of a quadratic grid of dimensions 5x5 can be seen in the center of the diagram. A Skyscraper puzzle with False clues (each clue number is off by one) must be solved within this grid. The clue numbers are invisible for the moment; in order to make them visible, you must solve a Standard Slitherlink puzzle first. When this is done, you will be able to see the clue numbers around the grid (if necessary, blacken the interior of the loop you just obtained).
