

Classics Collection

Group 17: Star Battle (*Hausigel*)

This is the seventeenth group in our Classics Collection series. Have fun!

Puzzle instructions: Place stars in the grid such that each row, each column and each outlined region contains exactly the given number of stars. The stars cannot touch each other, not even diagonally.

Example and Solution:

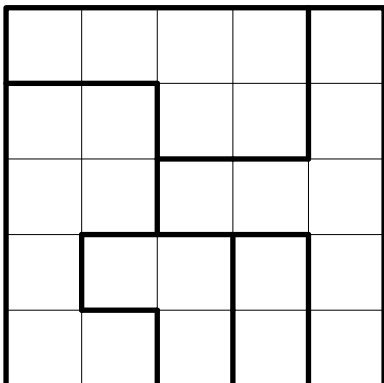

Solution code: For each row from top to bottom, enter the column number where the (first) star appears, i.e. 1 if there is a star in the leftmost column, 2 if there is a star in the second column, etc.

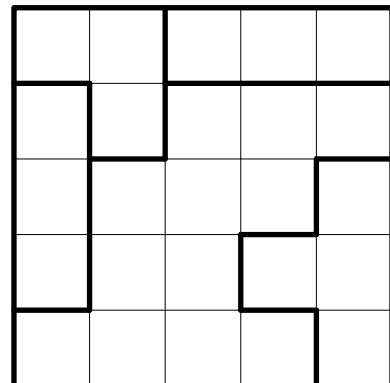

In the example, the solution code would be: **41352**

Note regarding syntax: For this group, the *PuzzleCheck* tool will ignore all characters except digits, hence spaces and separators (such as commas) can be entered at will.

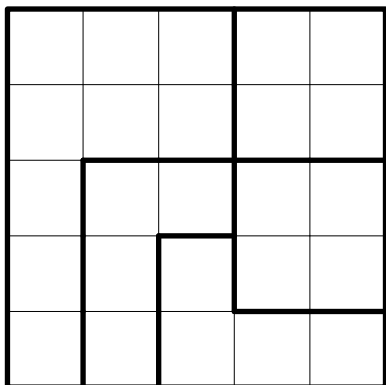

Star Battle 1

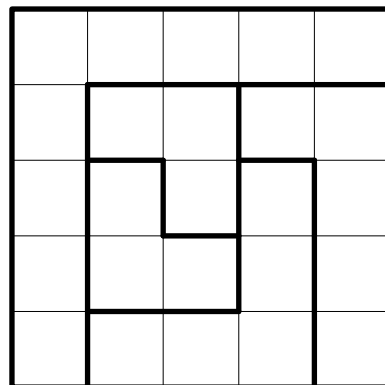

Star Battle 2

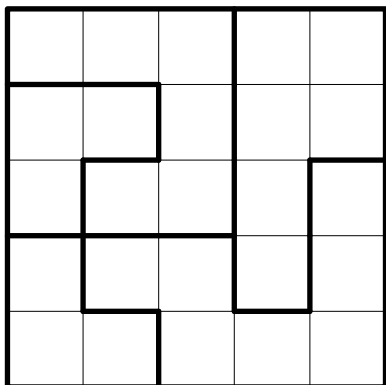

Star Battle 3

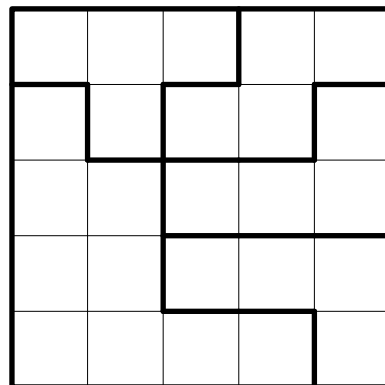

Star Battle 4

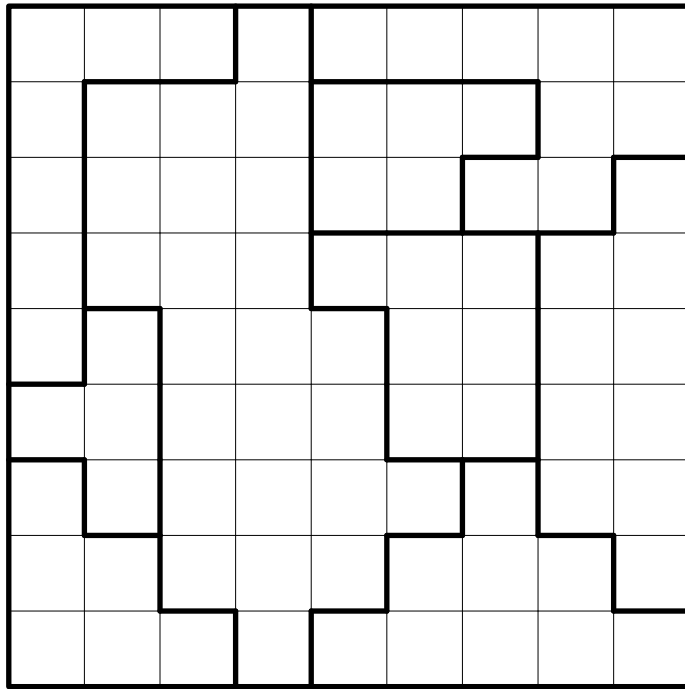

Star Battle 5

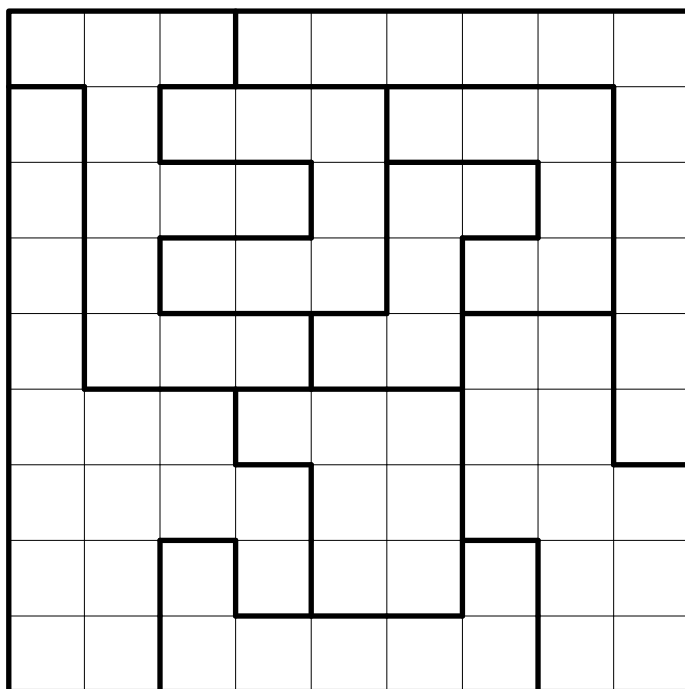

Star Battle 6

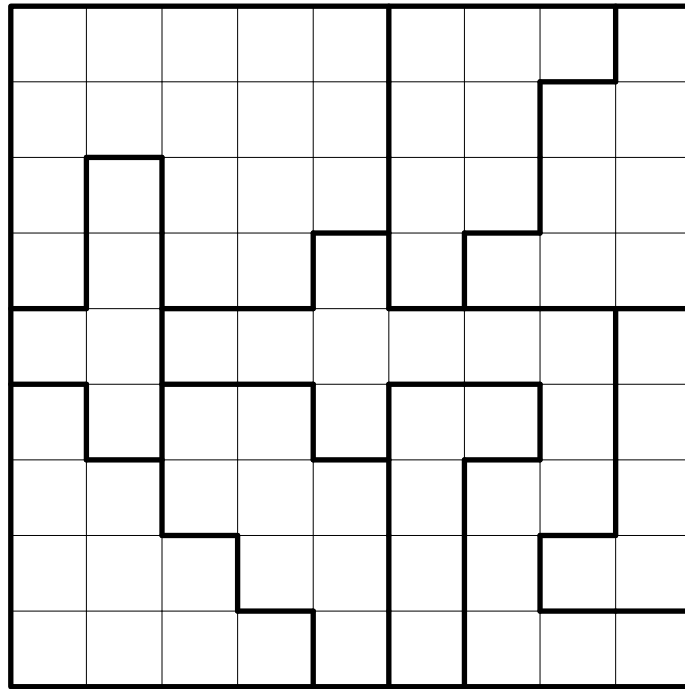

Star Battle 7

Star Battle 8

Star Battle 11

Star Battle 12
